

With Berker B.IQ we make it even easier for you to control the functions of your intelligent house. Up to four function elements of the instabus EIB can be combined in a single control unit: a temperature controller, information display, tactile sensor and timer.

Lighting scenarios and other applications can be adapted to changing needs easily and without any software so simple that anyone can do it. And there are also clever details such as the transparent label strip which can simply be removed once you become familiar with the system. Or the status LEDs arranged on the side which show what functions are active at any given time. Or the display which communicates with you in plain text.

Available surfaces: brushed stainless steel, glass, polar white.
